

C276

Kind to machines, operators, **AND** your bottom line. **TRIM® C276.**

TRIM® C276: versatile solution for the bearing grinding industry

- Consistently high production rates with predictable, superior part quality
 - Excellent corrosion protection even on high-carbon, hardened steels
 - Cooling and lubricity for grinding even 52100 high-strength alloys without metallurgical damage
 - Clean running, low residual film – for easy, accurate automated gauging
- Reduced operational cost
 - Exceptional sump life in both central systems and individual machines
 - Very low carryoff – reduced make-up costs
 - Minimum tankside additives even in large central systems
 - Very high flux rates – for fine filtration and lower media cost
 - Superior tramp oil rejection – reduces residues, improves filtration
- Operator satisfaction
 - Superior health and safety profile from independent laboratory testing
 - Cleaner, safer work environment with less oily residue, mist, and odor

C276. Keep your bearings rolling off the line.
